**Solutions and Manpower Provider**  
**Operational Experience & Engineering**  
**Portfolio**

**ODS Team**

# Company Operations

ODS (Oilmen Drilling Services) is an engineering-driven company providing drilling and completion fluids engineering manpower for onshore and offshore drilling projects.

ODS is formed of a highly experienced team of drilling and completion fluids engineers with a proven operational background across multiple international and regional projects.

ODS operates with a strong focus on fluids engineering control, field execution, and operational efficiency.

Our approach is based on:

- Real-time engineering decision-making
- Practical field experience
- Risk-based operational planning
- Performance-driven execution

In Azerbaijan ODS Engineering team , as specialized engineering partner, has delivered Drilling and Completion Fluids services under the CDF, Azorel, GL Group and SOCAR CDWT operational umbrella. For these customers the following activities were carried out by the ODS engineering team:

- Field Engineering execution
- Fluid System Design for different conditions
- Field Supervision
- Drilling and Completion Fluid Program Design
- Solids Control Equipment Engineering support and manpower

# Equipment and hydraulic Simulation support

ODS is supported by API-certified Drilling and completion fluids engineers and API certified solids control specialists, with in-house capability in hydraulic simulations, Modeling

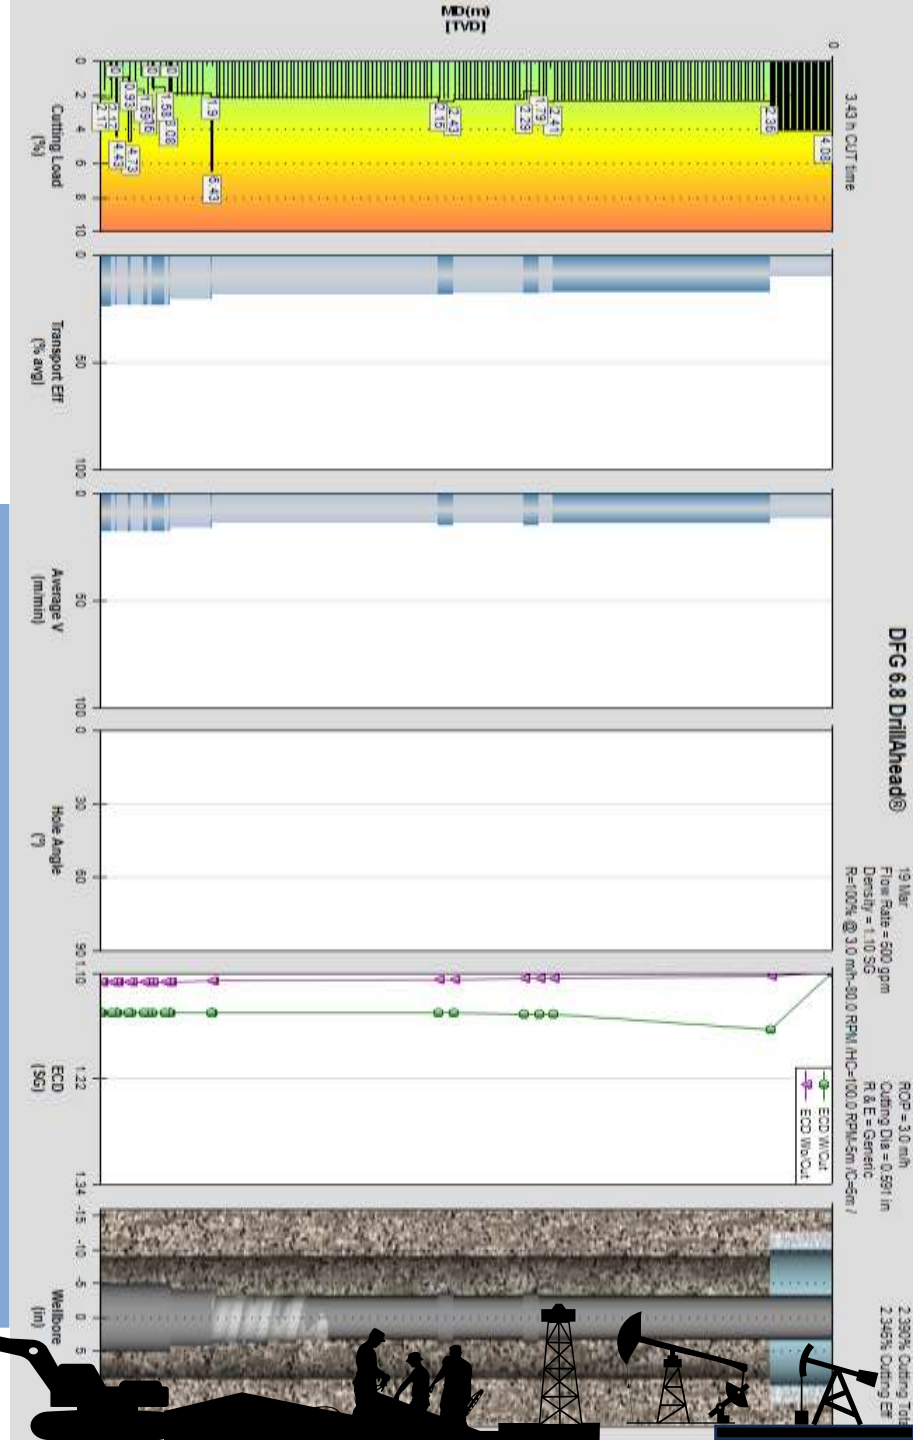

Additionally We could offer our OFITE-certified mud laboratory equipment maintenance and repair assistance

## Engineering, Repair and Hydraulic Simulations

- Hydraulic simulations and modeling for drilling and circulation optimization
- Hole cleaning efficiency evaluation and optimization
- Support for narrow margin PPFG wells
- Drilling performance optimization based on real-time data

## TECHNICAL CAPABILITIES

- OFITE certified Drilling fluids laboratory equipment maintenance and repair assistance
- Calibration, certification and operational support for laboratory instruments
- Solids Control Equipment integration support (Equipment Installation schematics at rigsite, mixing systems, filtration, barite dispersion)

# Drilling Ops infographic Map

The map below illustrates the scope of drilling fluid services executed by the ODS team under one of our customer, the Azorel LLC banner in Azerbaijan.

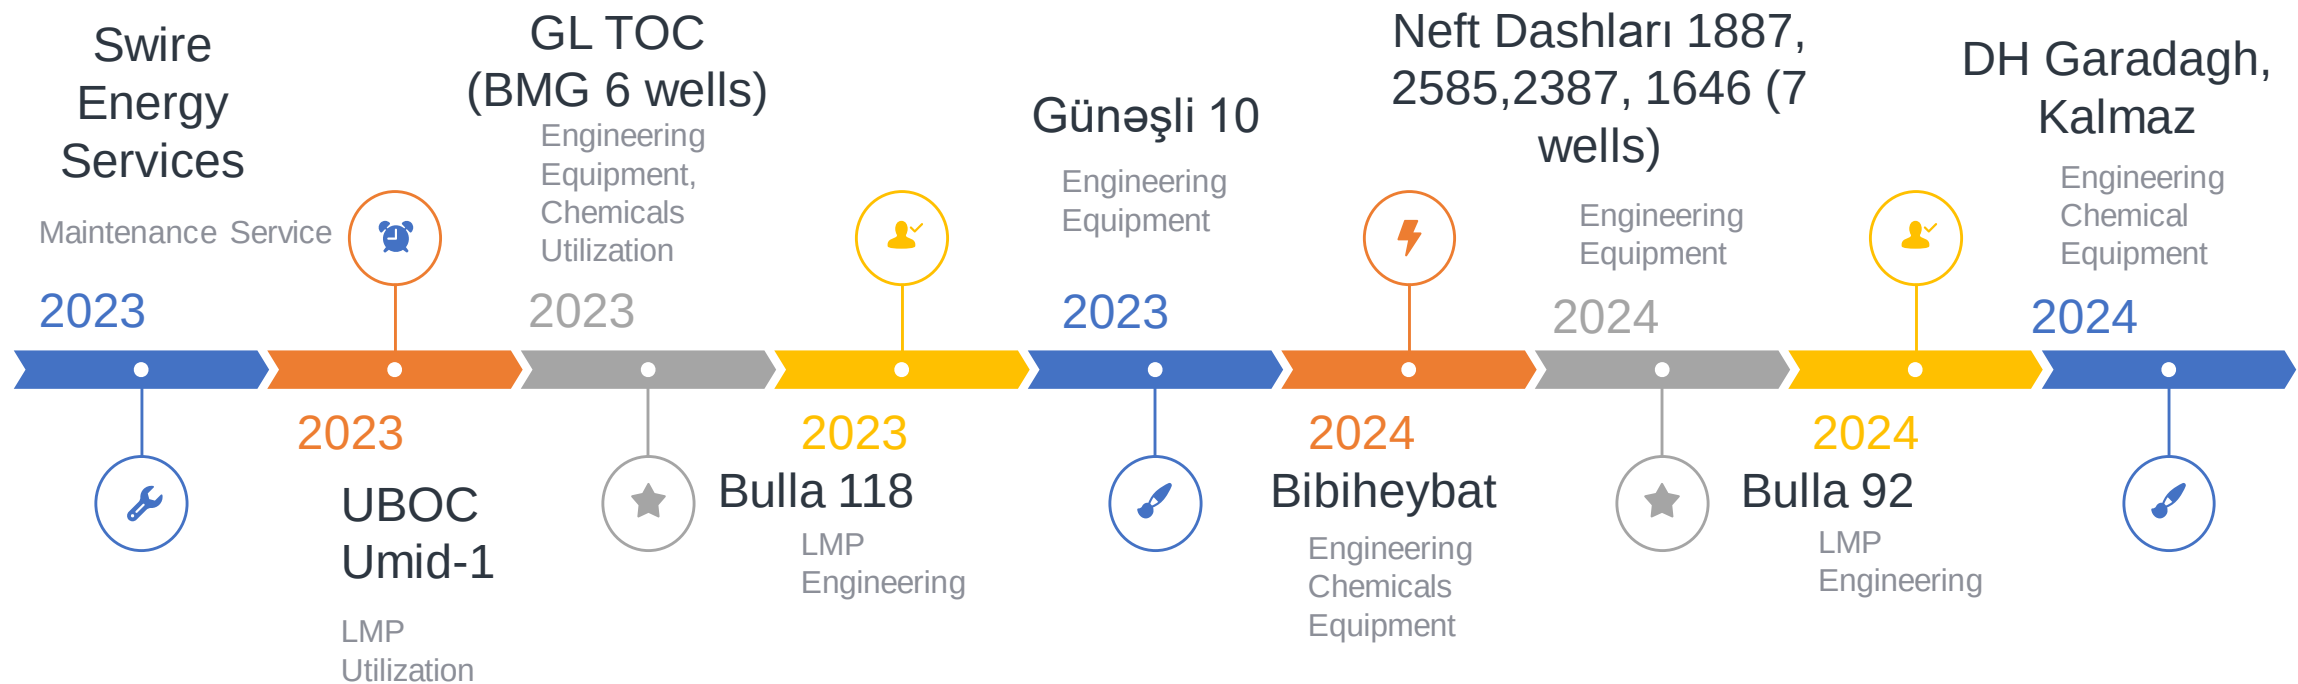

| Şirkət    | Layihələr         | Məhlulun növü |
|-----------|-------------------|---------------|
| SOCAR     | Neft Daşları 1887 | WBM           |
|           | Neft Daşları 2585 | WBM           |
|           | Neft Daşları 2387 | WBM           |
|           | Neft Daşları 1646 | OBM           |
|           | Günəşli 10        | OBM           |
| GL TOC    | Buzovna-Maştağa   | OBM           |
|           | Qala              | OBM           |
| DH        | Qaradağ           | OBM           |
|           | Kalmaz            | OBM           |
| GLOLYNX   | Bibiheybət        | OBM           |
| SOCAR AQŞ | Bulla 92          | OBM           |
|           | Bulla 118         | OBM           |

# Project Timeline

The timeline illustrates the chronological sequence of projects awarded to AZOREL in collaboration with the ODS team, along with the services delivered.

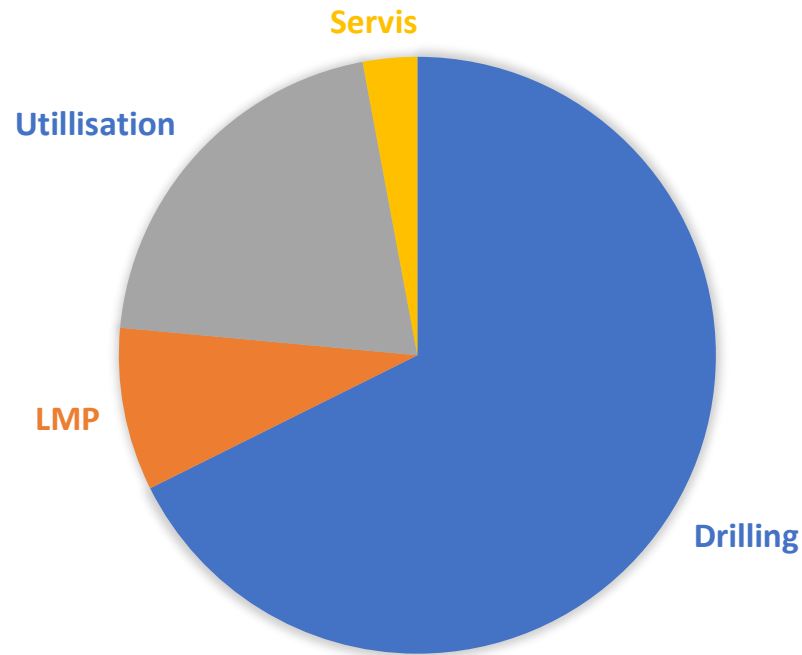

# Projects Scope

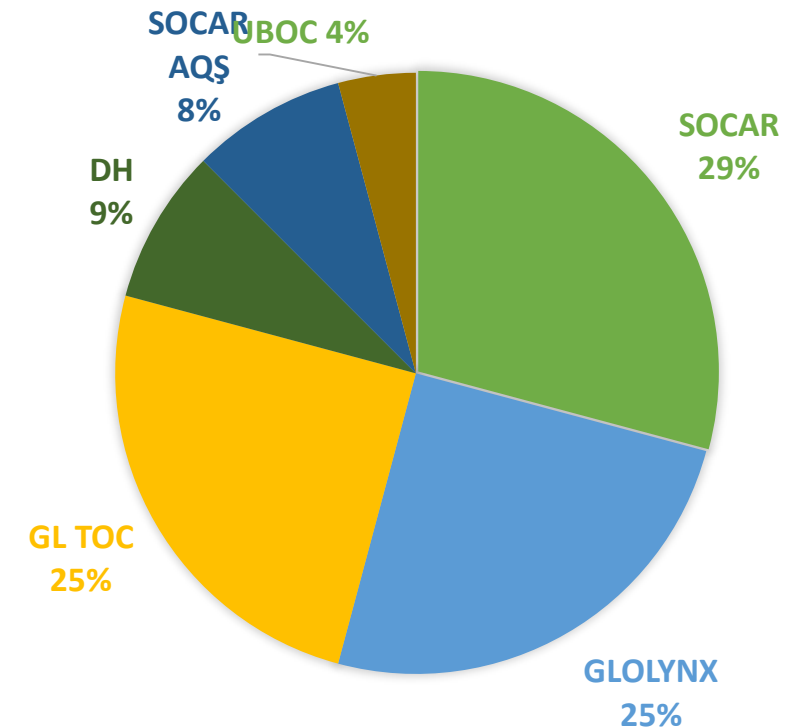

The pie charts below show the ODS team's contribution to AZOREL by service type and company, based on well count.

## DISTRIBUTION OF SERVICE TYPES BY WELL COUNT

## SERVICE TYPE SHARES BY NUMBER OF WELLS

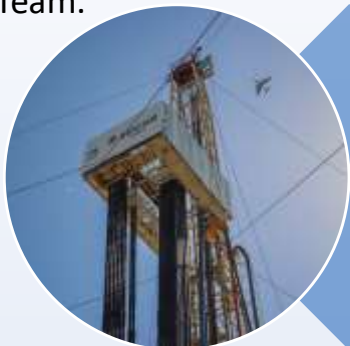

# GL TOC Operations

Starting from June 2023, the first well at GL TOC was successfully drilled and handed over. Subsequently, four additional wells at the Buzovna–Mashtagha area and one well at the GL TOC Qala site were successfully drilled and handed over in February 2024. According to preliminary data, these wells collectively produce an average of approximately 30 tons of oil per day. All of Fluids operations and Solids Control Engineering services were managed by ODS Team.

## Buzovna-Mashtagha, 5 wells

- ✓ Mud Engineering
- ✓ Chemicals
- ✓ Solids Control
- ✓ Mud Utilization

## Gala, 1 quyu

- ✓ Mud Engineering
- ✓ Chemicals
- ✓ Solids Control
- ✓ Mud Utilization

# Socar Operations

ODS Team provides Mud Engineering and Solids Control Equipment supervision services for mud cleaning equipment during drilling operations at SOCAR's Neft Dashlari and Gunashli fields.

## Neft Dashlari Oilfield

Using polymer-based and Oil-based drilling fluids, the successful drilling and handover of the following wells to the client were ensured:

- Oil Rocks DSB #1887 – 3 wells
- Oil Rocks DSB #2387 – 3 wells
- Oil Rocks DSB #2585 – 1 well
- Oil Rocks DSB #1646 – 1 well

## Gunashli Oilfield

At the Gunashli 10 DSB site, a slim hole well was successfully drilled and completed using Oil Based drilling fluids over a four-month period and subsequently handed over to the client. Based on preliminary data, the well is currently producing approximately 40 MT per day.

# DH (Demirören Holding) and ODS Operations in Azerbaijan

## Garadagh 609 well

- ✓ Mud Engineering
- ✓ Chemicals
- ✓ Solids Control

## Kalmaz 659 well

- ✓ Mud Engineering
- ✓ Chemicals
- ✓ Solids Control

# DH (Demirören Holding) and ODS Operations in Azerbaijan

At Garadagh Well No. 609, ODS engineering team implemented intensified operational measures to prevent ongoing drilling fluid losses caused by well complications. The Customer was DH Oil Service Construction

Despite challenging terrain conditions, ODS Team under the Azorel umbrella ensured the prompt delivery of the required chemical reagents in response to operational needs at the wellsite.

At Garadagh Well No. 609, the ODS engineering team applied effective pipe freeing solutions to address a concurrent differential sticking event, carried out immediate analyses, and played a key role in freeing the stuck tool after 7 days of stuck pipe accident.

In addition, in response to the operational requirements of the situation, our engineering team carried out equipment integration to add dispersed barite into the active system for the first time on an onshore drilling rig in Azerbaijan, for which the team was awarded a Letter of Appreciation.

# GLOLYNX Operations

The ODS Team provides Mud Engineering consultation services for GLOLYNX's drilling operations at the Bibiheybat field.

- In cooperation with GLOLYNX, drilling operations at the Bibiheybat field began in March 2024 with Well No. 3474. As of today, 13 wells have been successfully drilled and delivered to the client.
- All wells were drilled using diesel-based drilling fluids, and drilling operations for the twenty-sixth well are currently ongoing.

# ODS Experience

ODS engineering teams have executed **nine (9) parallel projects and established new API Accredited Central laboratory** under the **CDF operational framework**. Under the CDF operational flag, ODS engineers played a key role in drilling and handover of **dozens of wells** in the following fields:

Scope of work included:

- Drilling and drilling fluids engineering
- Chemical Products supply coordination and testing
- Solids Control Equipment Engineering
- Brine Filtration
- Fluid conditioning processes at LMP

## **Offshore:**

- Neft Dashlari
- Gunashli
- West Absheron

## **Onshore:**

- Lokbatan
- Garadagh
- Kalmaz
- Siyazan
- Bibiheybat

The ODS Team has constructed and operated a new large API accredited Mud laboratory facility under the CDF umbrella.

# Azeri MI/BP Experience

ODS engineers have also contributed under the **Azeri MI Drilling Fluids** operational framework, supporting **BP-operated projects**.

This experience exposed the team to world-class operational standards and complex offshore drilling environments.

Projects supported include:

- Azeri–Chirag–Gunashli (ACG)
- Shah Deniz
- Babek
- Bulla
- Additional BP-operated drilling campaigns

These assets represent some of the most technically demanding fields in the region.

# Advanced Drilling & Completions

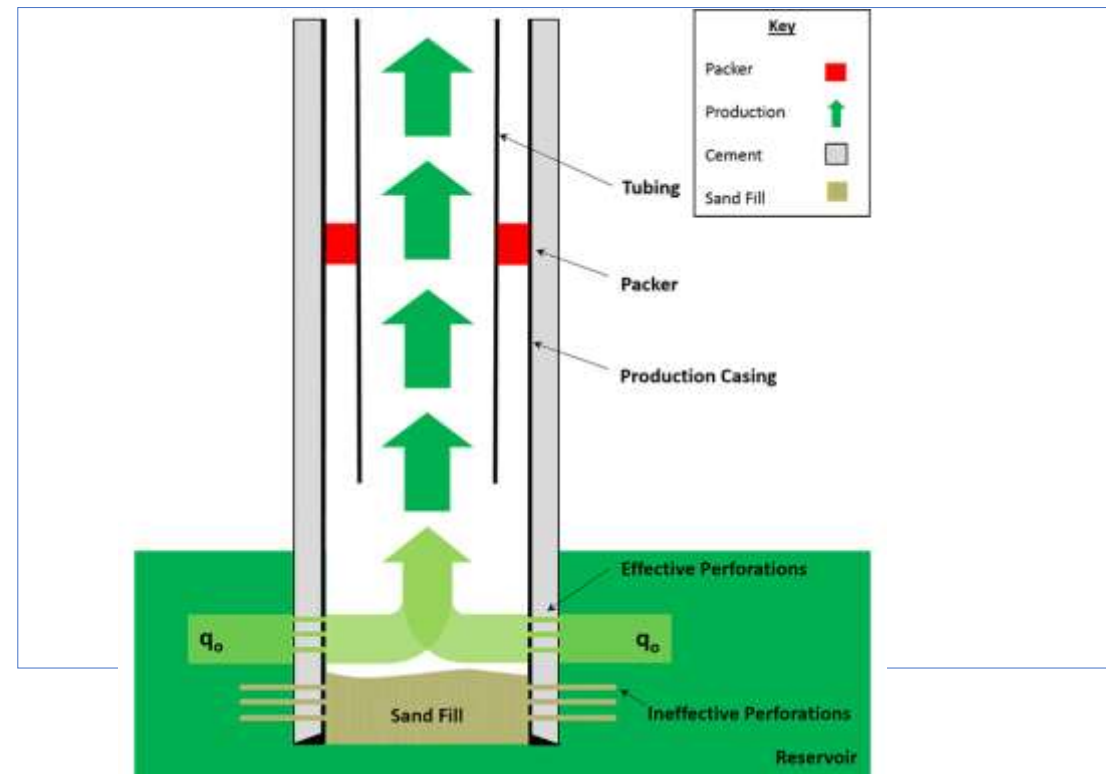

ODS engineers have executed advanced drilling and completion fluid operations, including:

- High-performance drilling fluid systems
- Complex completion fluid programs
- Extensive chemical Products vendors portfolios

The engineering team has hands-on experience with:

- Multiple completion fluid systems
- Advanced displacement methodologies
- Techniques such as **EROD displacement**

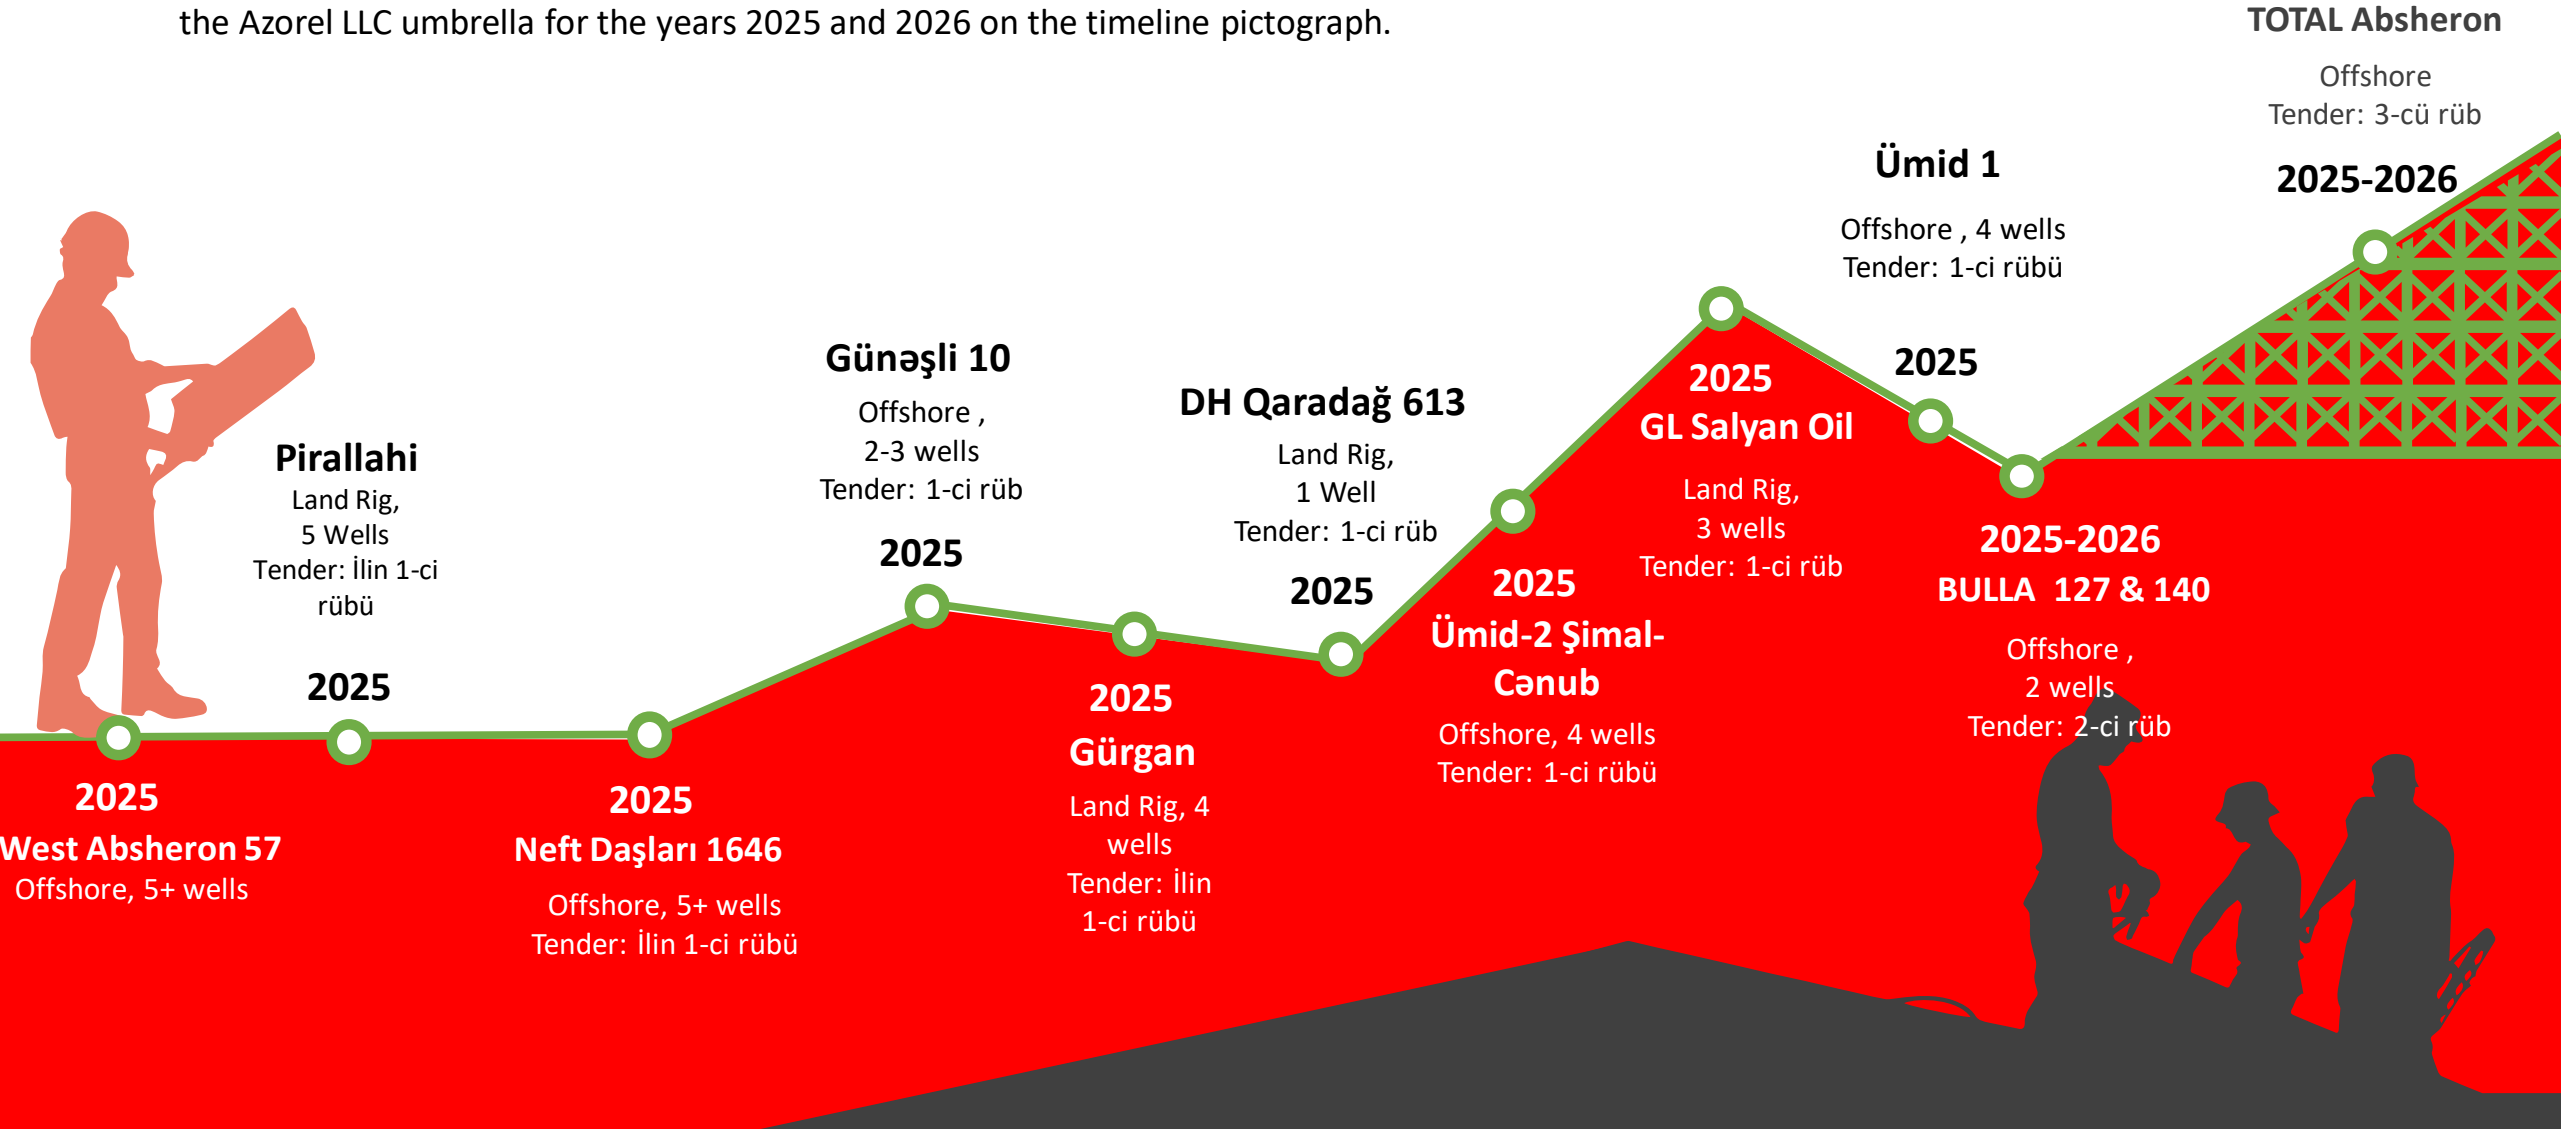

These methods were applied in both onshore and offshore operations.

# Planned Projects

The list below shows the projects that ODS team plans and aims to operate under the Azorel LLC umbrella for the years 2025 and 2026 on the timeline pictograph.

# ISO Certificates

The Development Stage below presents the list of international standard certifications that ODS has rendered assistance to achieve by AZOREL during its years of operation, as well as the standards targeted for future certification.
