

Why ODS Engineering Team

- Field-proven drilling and completion expertise
- Integrated fluids engineering approach
- Chemical and solids control capability
- Experience across multiple operators
- Focused on well integrity and risk reduction

Engineered Solutions. Proven in the Field.

Engineering Focus

Field-proven engineering expertise
across drilling and completion fluids,
built on real operational experience.

ENGINEERING TEAM

**Drilling & Completion
Fluids Specialists**

Field Experience

Azeri-MI

Drilling fluids field optimization under complex geological conditions.

Wellbore stability and NPT risk reduction through real-time engineering decisions.

Caspian Drilling Fluids

Design and execution of WBM and OBM systems.

Laboratory-to-field performance alignment and technical problem solving.

Azorel

End-to-end drilling and completion fluids support.

LMP operations, chemical management, and reservoir protection solutions.

Solids & Chemical Control

ODS provides integrated solids control and chemical management services to maintain drilling fluid performance throughout operations.

- Shale shaker, desander, desilter optimization
- Fine solids control and dilution strategies
- Chemical treatment optimization
- Mud conditioning and contamination management
- Continuous performance monitoring and reporting

Effective solids control reduces non-productive time and extends fluid life cycle, ensuring cost-efficient operations.

Advanced Drilling Fluids

ODS Engineering Team provides tailored drilling fluid systems designed to perform under complex geological and operational conditions.

- Water-Based Mud (WBM) systems
- Oil-Based Mud (OBM) systems
- Inhibition and shale stability solutions
- Clear brine systems (NaCl, CaCl₂, CaBr₂)
- Filtration and solids-free completion fluids
- Fluid compatibility and formation damage prevention
- Laboratory testing and on-site fluid management
- Wellbore clean-up and displacement support

Our engineers integrate laboratory data with real-time field monitoring to ensure drilling efficiency, well integrity, and operational safety.
